Kano University of Science and Technology (KUST), Wudil

**PROJECT TITLE: BUILDING OF SCIENCE EDUCATION
DEPARTMENT.**

Introduction: Building of science education in KUST Wudil which is uncompleted it was established around 2012, the project of tertiary education trust fund (TETFUND) and contractor of shanks, JBTRADING COM, quantity surveyor, mobat quantity, consultant, structural engineers Olkon international limited mech/Electrical engineer remark associates.

The unit are headed by a director who is responsible for the physical planning development of the university as well as building and entire maintenance and general keep up, and the capital project unit deals with the development of student of science education.

Main body:

The construction of the department's was established around April 2012, the project was established by the tetfund tertiary education trust fund (TETFUND) is

client at Kano university of science and technology wudil (KUST) which is along Maiduguri road.

The construction of the department science education is along post graduated road opposite biology and physics department at front of post graduate, at the right NCC way at the left physics department and science its at the center.

The construction is made up of concrete, cement rocks, and many bonding goods the department (science education) it take much time due to the nature of our country since 2012 it was started building but up to 2019 ending the building does not construct the we don't know the actual problem which make the department(science education) is uncompleted.

Department (science education) is place or center which usually awareness of the learner's investigate and how they take they reach or project for the final year student in the university or center of information like "CITAD" and guide the learners or other people in form of how to communicate with other people or even how to know their self in general, or human builder.

In our university we don't have adequate science education department the one we have is a very small and then there is no adequate goods and service for awareness the student for example in form of guidance and counselling that used for student and the parent to investigate our ones is very small it will not take many

people in it in order to have the right awareness in groups-groups or class-class. This problem it will affect the student they are on graduation label, how reach their project, how to do it, how to take it more important at the time.

The department's (science education) which uncompleted it's a very big it build like theatre's which contain three(3) department in around one, biology, physics, chemistry but known it look like way, we student used the build as a way to go if it's closed. The venue that we had lecture, and we call it as "short cut way", in stead of long process way we used the build as are, our way and some used it as reading place and some bad student used it hide their self in it for smoking and other bad habit character's and so on.

Conclusion

At the end of the project we hoped to complete the uncompleted building and provided the aims and objective of setting committee or union of the university to encourage the advancement of learners and to hold out to all the opportunities of acquiring higher and liberal education regardless of origin.

So the building of department's (science education) it took too much time was established around 2012, which take too much time does not complete, then used the small one as managed and in this old one no adequate material for report project, research and others.

We hoped to encourage and promote the beneficiary, Kano University of Science and Technology, Wudil (KUST) and sponsor project tertiary education trust fund (TETFUND) to completed the department's in order provide a good and adequate materials in the sceince education For studen decommentation and research in the university.
